

Turners

- "C-Frame" opening sized vertically to your standard unit height can eliminate the need for "Load Clamping".
- Wide load bearing surfaces to support your load on 3 sides with "funneled" opening for easy load access.
- Over size lift truck fork access.
- Restricted machine speed provides safe and predictable performance.
- Heavy industrial steel body and base.
- Adjustable machine speed.
- Load can be stopped at 90° for load inspection.
- C-Turners are air and electric driven, so there is no potential for product damage from leaking hydraulic fluid.
- Fail-safe machine design protects employees, product and machine.
- Rotating Turner can be loaded and unloaded from the same side.

MAXIMIZE DRYER PRODUCTION

Sweed C-Turners are essential machines for plants that process flat material such as panel, plates, or any large wood, metal or composites. C-Turners make it practical to inspect and process two-sided material of virtually any size. Units are available in Wide for 16' or longer material; Giant, for the processing of exceptionally large units; Standard, for 8'-12' material; and custom sizes to meet any application need.

If space is a premium, a rotating base allows lift operators to load, turn, and retrieve material from the same side. Loads may be completely turned in as little as fifteen seconds, or paused in the upright position for inspection or individual piece removal. Broad, air-driven clamping forks hold the material firmly in position while moving. The clamping forks and the jaws of the "C" may be supplied with nonabrasive padding to protect marrable surfaces, and the back of the "C" with a cushioned backstop to prevent damage to fragile edges. They feature a fail-safe design. Even if both air and electricity fail, the load remains secure.

INCREASING DRYER PERFORMANCE FOR OVER 50 YEARS

Sweed Machinery manufactures a complete line of dryer support products. Each piece is designed with dryer efficiency in mind. With so many dryer configurations being used in the industry today, the benefit numbers vary. Give the experts at Sweed a call! With a quick review the Sweed panel experts can calculate the best solution to enhance your existing dryer system.

Panel Turner

Within the conveyor line, each panel can be uniformly or selectively turned for grading purposes. Sweed Panel Turners feature nonabrasive arms that gently overturn the panels without damaging delicate veneer or laminate.

Pass Thru Turner

Pass-through bundle turners can be positioned in the middle of a conveyor line or between operations to greatly speed up production.

Trusted names currently using Sweed Bundle Turners:

- Georgia Pacific Corp.
- Weyerhaeuser Co.
- International Paper Corp.
- Roseburg Forest Products
- Boise Cascade Corp.
- Louisiana Pacific Corp.
